# EIGHT PHASE APPROACH TO INCIDENT SCENE MANAGEMENT

## Phase 3

Arrival at the incident

**Ed Sullivan**

Hazardous Materials Principal  
Consultant,  
NCEC

**Josh Allaway**

Senior Emergency  
Responder,  
NCEC

**Dr. Nigel Blumire**

Training Product  
Manager,  
NCEC

# Eight phase approach

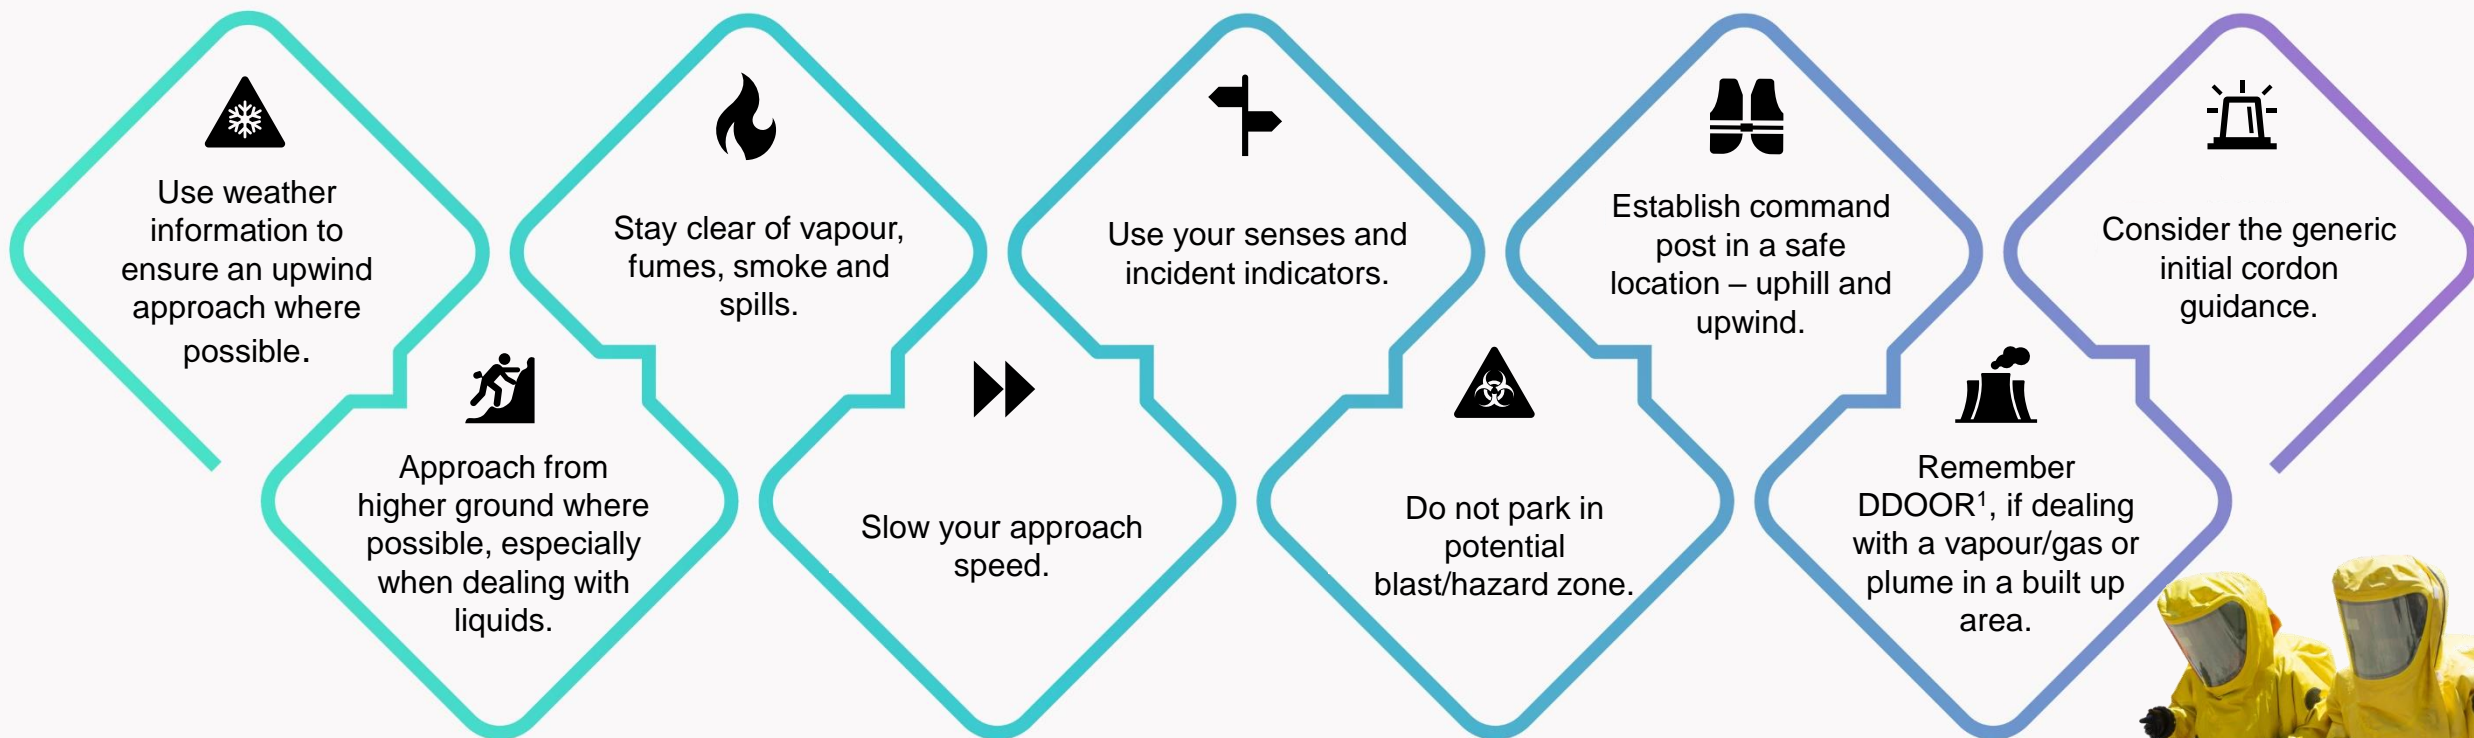

## Aim

To help responders be safe, effective, competent, and confident during their response to an incident involving hazardous materials.

<sup>1</sup>DDOOR – downwind, dilution, obstacle, oscillation and retention

# Arrival at the incident

Dynamic risk assessment

How do we get additional information for this assessment?

- Vehicle placarding.
- NAMOS.
- SOPs.
- Safety data sheets.
- ERG.
- Chemdata<sup>®</sup>.
- Chemical risk assessments.
- COMAH/Seveso emergency plans.

FACTS

# Cordons

NCEC  
Part of Ricardo

Ensure that your final approach to the incident is from an up hill and up wind direction where possible.

Implement cordons at an early stage of the incident and communicate them.

Life risk is an absolute priority and when arriving at the scene of operations. Incident commanders need to establish, if any, and how many people are involved.

NCEC's Hazmat Academy training prospectus

Eight phase approach to incident scene management

Hazmat response: the significance of the first 20 minutes as a first responder

Next Generation Virtual Business Summit: Virtual Hazmat 2021

Global 24/7 telephone emergency response helpline

Next Generation Virtual Business Summit: Planning and implementing a proportionate response to a chemical incident
